

Renewable Energy Heating Appliances BIOMASS • AGRI-FUEL

WHY BUY A MULTIFUEL STOVE?

You have just received another delivery of fuel that equals your house payment. You're just plain tired of having to put up with turning the thermostat down to conserve heat, put on another sweater & blankets & it still is just too cold! Last but not least you would like to feel the warmth that you had with wood & yes you miss the romance of watching a fire burn.

With the capabilities of burning a wide variety of fuels including shelled corn, wood pellets & a host of other fuels they will not fill up our landfills as waste & will save you on your home heating costs. The cost savings for burning these types of fuels is substantial over conventional means of heating depending on the area that you live in and the type of fuel available. Modern technology has joined up with good old fashioned warm radiant heat to give you an affordable alternative to high heat costs.

Shelled corn remains the most economical cost alternative allowing you to save up to 60% on your heating bills. This helps the local economy and is renewable in a few short months.
