

## *AES Technical Bulletin*

### **Crossfire Control Board Cover Plate Installation**

**Product models covered:** Country Flame Crossfire (CFO4-P, CFO4-C & CFO4-FLEX) models

**Topic:** This technical bulletin will be addressing how to install the control board cover on the Country Flame Crossfire models.

**Tools needed:** 7/16" wrench

**Procedure:** Unplug the stove. When looking at the stove, open the left side panel. NOTE: Do not allow any pull on wires. Picture 'A' shows the backside of the left side panel where the control board is installed. Using a 7/16" wrench unscrew and remove the bottom two nuts and locking washers from the side panel frame (see picture A), leaving the bolts in place. Install the cover plate on to 2 side panel bolts, with insulation facing away from the control board (see picture B). Make sure the wires are pulled to the outside. Install the 2 lock washers and nuts. Close side panel (see picture C) and your have installed the control board cover plate. Picture D shows the installed control board cover plate from above, looking down.
